

### **73. SECURE P2P FILE SHARING IN MANETS USING AMBASSADOR AND COORDINATOR RELATIONS**

Snegapriya .S -M.E Student, Srinivasan.G Assistant Professor M.N.M Jain Engineering College Chennai, India

Peer-to-peer file sharing is the distribution and sharing of digital media using peer-to-peer technology is one of the application in Manet.p2p file sharing allows users to access media files such as documents,books,games,music etc using a p2p software program that searches for p2p network to locate the desired content. In p2p file sharing methods there are three groups such as flooding based, advertisement based and social network. First two groups have the high overhead and low scalability due to this network failure occur. The third group social network based file sharing introduces the SPOON and GOSSIP methodology to avoid the network failure, data loss, high overhead, low scalability etc.This method is used for Disconnected Manets.The advantage is increasing the file searching efficiency among the nodes which gives the accurate result.
